

WORKSHOP ON BASIC COLPOSCOPY

30th June, 2019

Cervical cancer is the most common form of cancer that affects women in developing countries. This demonstrates the urgent need for streamlining the screening strategies. In India alone, over a lakh women are diagnosed with cervical cancer and the mortality rate is above 60%. Colposcopy plays an essential role in early pre-invasive diagnosis and treatment and can be pivotal in reducing the death rate.

Cash/Card payment accepted

You can also pay the registration fee via

paytm

* If you're paying through Paytm, please write your name and the workshop title in the description box. Alternatively, you can take a screenshot of the transaction receipt and whatsapp/mail it to Ms. Nagamani.
