FETAL MONITORING

WORKSHOP

Fernandez Hospital Foundation invites all obstetric care providers, doctors, nurses and midwives to a workshop on Fetal Monitoring.

Staying updated with the technology and acquiring the skills to support it is a career necessity. This workshop aims at covering all the available fetal monitoring tools – electronic fetal monitoring, ultrasound-based fetal surveillance, the concepts / procedures of fetal blood sampling, scalp lactate estimation, the application of scalp electrode and the importance of umbilical cord arterial blood gas analysis.

This workshop will contain lectures, case scenarios, videos and interactive sessions to make it an interesting and enjoyable learning time. We welcome all of you, working in the Labour Wards. The number of participants have been limited to 60, so please register early.

WORKSHOP HIGHLIGHTS

- Basics of Electronic Fetal Monitoring
- Intermittent Auscultation Vs. Electronic Fetal Monitoring
- Uses of Scalp Electrode and Fetal Blood Sampling
- Antepartum Fetal Surveillance (USG based Fetal Surveillance)
- Intrapartum Fetal Surveillance – Case Scenarios
- Importance of Cord ABG
- Case-based discussions
- Medico-Legal Implications
